

SAFETY FRONTCAM

A new vision from high trucks

FLEXIBLE CONNECTIVITY

Link a RearCam to the FrontCam and drivers can also see behind the vehicle, enabling them to reverse safely and quietly without assistance. Adding a navigation system saves money and cabin space, consolidating two systems into one single display.

WIDE-ANGLE LENS

The robust Safety FrontCam and its wide-angle lens are manufactured in the Netherlands to the highest quality standards. They are officially tested following the European mirror directive EU*2003/97*2005/27 for the FL, FE, FM and FH series.

USER-FRIENDLY MENU

The software menu can be displayed in all European languages. This ensures drivers can easily and correctly set the system for optimum image switching and presentation.

MAKING YOUR JOB EASIER

The Safety FrontCam gives high-truck drivers a wider field of vision than a front mirror. This makes it easier to detect objects and people around the vehicle for maximum safety.

40% MORE VISIBILITY

The Orloco lens 'sees' above and beyond the mandatory European requirements for high trucks. Compared to a front mirror, the vision extends farther past the blind spot in front of the truck, and also reveals what's happening in the blind spot to the side of the vehicle.

UNOBSTRUCTED VISION

When the sun visor is down, the vision onto a front mirror is blocked. On wet days, wipers don't clear the windscreen where the front mirror is mounted. The integrated dashboard display of the Safety FrontCam always gives drivers an excellent, unobstructed vision – rain or sunshine.

INTEGRATED DESIGN

The Safety FrontCam is inconspicuously integrated into the truck design. Since it doesn't protrude like a front mirror does, it can't be hit or damaged in tight curves or the truck wash. The compact camera is an attractive and state-of-the-art front view solution.

SOLID CONSTRUCTION

Once the camera has been correctly positioned – it stays there. There is no need to readjust it after the truck has been through the wash. The positioning will always be correct for every driver, no matter what their height.

Safety FrontCam

VISION IS OUR MISSION

ORLACO – THE VISION SOLUTIONS COMPANY

Orlaco has years of experience in designing and producing outstanding camera systems for vehicles and vessels of all kinds, making it possible for operators to work more quickly, safely and comfortably under all conditions. The company is ISO 9001-2000-certified, and works exclusively with VCA-certified technicians.

Orlaco Safety FrontCams can be purchased from and installed at any of the company's European network of Volvo dealers. Orlaco also offers tailor-made solutions for Volvo trucks, including integration with the Volvo Dynafleet system, ADR solutions, truck/trailer cables, Class VI brackets and DDIN frames for Volvo FM and FH.
